

# **APRIL 2013 CTB MEETING**

C22

**0095-964-221, N501**

**Chesterfield & Dinwiddie Counties**

This pavement maintenance project will plane & overlay the asphalt pavement, localized patching of the travel lanes, repave asphalt bridge decks in Dinwiddie County, install rumble strips, replace asphalt curbing, & guardrail work on I-95 south of the James River. A detour at the Maury St interchange at Exit 73 is required. Detours are also required at the Willis Rd interchange at Exit 64 and the Route 895 detour at Exit 67. Detours are required at the Commerce Rd/Bells Rd interchange at Exit 69 and the E Washington St and E Wythe St interchange at Exit 51 and Exit 52 as well. No height or weight restrictions will be necessary. There will be impacts to the motoring public due to lane & ramp closures. Ramps, shoulder, single lane closures, double lane closures, & detours are allowed Sunday 6:30 PM to Friday 6:00 AM in the northbound lanes and Sunday 7:00 PM to Friday 6:00 AM in the southbound lanes.

Fixed completion October 25, 2013

B19

**0360-964-120, C501, B601, B606, B607, B608**

**Henrico & Hanover County**

This project consists of replacing four bridge structures on Route 360 over the Chickahominy River from 0.498 miles west of the Henrico\Hanover County line to 0.164 miles east of the Henrico\Hanover County line. Three bridges are located in Henrico County and one bridge in Hanover County. The bridges were constructed in 1923 and widened in 1941 and again in 1970. The proposed project is located within a commercial environment. There are five (5) business properties and three (3) undeveloped properties within the limits of the project. The construction improvements will require acquisition of Right of way from 10 parcels. Traffic will be maintained on Route 360 (Mechanicsville Turnpike) during construction by maintaining 2 lanes in each direction.

Fixed completion November 25, 2014

B21

**0017-089-118, P101, R201, C501**

**Stafford County**

This project relieves congestion on the Route 17 corridor in southern Stafford County by adding one through lane in the northbound and southbound direction of Route 17 from McLane Drive to 0.2 miles north of Stafford Lakes Parkway. The proposed typical section will consist of three north and southbound thru lanes, right turn lanes throughout and dual lefts where necessary. This project is on the Governors Initiative list of projects.

Fixed completion December 01, 2016

B63

**0267-029-919, P101, C501**

**Fairfax County**

This project constructs 13' high sound walls on both sides of Dulles Connector Road (DCR) between Chain Bridge Road and I-66 as required by the General Assembly's 2010 Budget Amendment. HB 30, line 436 G states, "pursuant to the provisions of the Memorandum of Agreement between the Commonwealth of Virginia Department of Transportation and the Metropolitan Washington Airports Authority, in conjunction with the construction of rail mass transit in the right of way of the Dulles Access/Toll Road Connector (DATRC), sound walls shall be constructed along residential properties from the beginning of the DATRC to Interstate Route 66 with funding from the Commonwealth Transportation Fund." Along this stretch of roadway are residential properties with few having wooden walls/barriers which separate them from the roadway and proposed rail traffic. The proposed sound walls are more effective than the existing wooden walls. In addition to the traffic on Route 267, the elevated Metro rail will operate in the median. Residents and the traveling public should not experience any significant impact from construction activities. No detours or roadway closures will be required for construction of this project, however temporary shoulder/lane closures may be required during off-peak hours.

Fixed completion April 30, 2015

B72

**0046-012-109, C501, B606**

**Brunswick County**

This project replaces the bridge on Route 46 over the Meherrin River and improves the roadway approaches to the bridge. The proposed bridge will be constructed approximately 70 feet to the west of the existing bridge in order to maintain traffic during construction. The existing bridge was constructed in 1948 and the existing deck width is 29.19 feet with approximately 24 feet of roadway width. The proposed deck width will be 46.16 feet with approximately 44 feet of roadway width. The bridge and piers will include aesthetic treatments (VDOT Drystack Option 1 pattern). DGIF recommends a Time of Year

Restriction for instream work, due to the presence of ST Atlantic pigtoe and ST Green floater Mussels, between April 15 thru July 31 and August 15 thru September 30.

The project is located within a rural residential environment. There are two (2) residential properties one (1) agricultural properties and two (2) undeveloped properties within the limits of the project. The construction improvements will require acquisition of Right of way from 5 parcels. Route 46 is a main link between the city of Roanoke Rapids, North Carolina and Route 58 and I-85 in Brunswick County. The current roadway known as Christanna Highway consists of two 11 foot lanes and 3 foot shoulders. The proposed design consists of two-12' lanes with 10' shoulders (8' paved and 2' graded). The existing and proposed pavement type is asphalt concrete.

Fixed completion December 12, 2014

B86

**0611-029-891, C501**

**Fairfax County**

This 2-lane section of Telegraph Road (Rte. 611) between S. Van Darn Street (Rte. 613) and S. Kings Highway (Rte. 633) is a severe bottleneck during the peak demand periods. The existing congestion (2010 ADT 25,200 vehicles) is expected to become worse by 2035 when the ADT will be 43,775 vehicles. Fairfax County has agreed to fund the entire project. This section is widened to a divided 4-lane facility with bike lanes, a 5 foot sidewalk, and a 10 foot shared use path. The existing twin pipe culvert at Dogue Creek will be replaced with a precast triple 3-sided arched structure. The existing parking for Huntley Meadows Park will be upgraded to accommodate 27 vehicles. The project was advertised with two different completion dates, seven months apart. Bidders were asked to price both dates and if the budget permitted, the earlier date would be chosen. The low bid was below the budget allowing the earlier completion date as shown below.

Fixed completion November 20, 2014

## ***DESIGN BUILD PROJECT***

**I-395 HOV Ramp at Seminary Road and the I-395 NB Auxiliary Lane Extension**

**0395-100-722 and 0395-100-736**

**City of Alexandria**

This Project consists of the I-395 HOV Ramp at Seminary Road (Ramp Project), and the I-395 NB Auxiliary Lane Extension (Aux-Lane Project). The Ramp Project consists of a single lane reversible HOV ramp from I-395 to the third level interchange bridge carrying Seminary Road over I-395 and the second level rotary of the interchange. The work includes widening and rehabilitation of the third level Seminary Road bridge superstructure and substructure, widening the approaches along Seminary Road and a new traffic signal at the intersection where the HOV ramp ties to the widened bridge. The Northbound

general purpose lanes along I-395 should be shifted to provide sufficient space for the HOV Ramp and an additional turn lane shall be added to the I-395 NB exit. The deceleration lane and taper lane along I-395 Northbound shall be adjusted, to include widening the I-395 Bridge over Sanger Avenue. A separate pedestrian bridge over I-395 is to be provided north of the Seminary Road Bridge.

The Ramp Project will also require an HOV Gate system that will need to be designed, constructed and coordinated with the other gate systems along the corridor. Impacts to the current VDOT ITS/TMS system will need to be identified and existing system features may need to be relocated as determined by the Design Build Team. Other utility impacts shall also be identified by the Design Build Team and relocation of those utilities will be included as part of the project.

The Aux-Lane Project consists of widening the existing on-ramp at Route 236 (Duke Street) to two lanes and extending the existing single auxiliary lane from the Duke Street Interchange along I-395 Northbound. The Aux-Lane Project ties to the Ramp Project at the southern terminus of the Ramp Project, approximately 300 feet south of Sanger Avenue. The Project shall include, but not be limited to, the following elements:

- (a) Project design and construction
- (b) Roadway construction and widening
- (c) Survey
- (d) Rehabilitation of the existing Seminary Road bridge
- (e) Bridge demolition, construction, and widening
- (f) Retaining walls
- (g) Noise walls
- (h) Hydraulics, including stormwater management
- (i) Traffic control devices, including ITS devices (gates) and lighting
- (j) Erosion and sediment control measures
- (k) Utility relocations.
- (l) Development and implementation of a Transportation Management Plan
- (m) Right of way acquisition
- (n) Public involvement / relations
- (o) Environmental permitting and compliance

Final Completion December 18, 2015
