

October 2009 CTB Meeting

C63

PM06-088-F09, P401

Spotsylvania County

This project paves I-95 at two locations that are comprised of three 12' wide lanes in each direction for a total pavement mainline width of 36'. The shoulders are also paved and are 10' wide along each side of the mainline. Minor rehabilitation, structural as well as non-structural maintenance actions are required to correct the existing deficiencies to the flexible or composite pavement structures. New pavement markings and markers, installation of milled rumble strips, as well as guardrail and end treatment upgrades will be installed.

Site Locations:

I-95 NBL Mile Point 129.77 to Mile Point 132.36

This section was last overlaid in 1993 with hot mix asphalt. The pavement distress data collected during the annual statewide pavement rating data collection activities have revealed low ratings indices.

Location #2,

I-95 NBL Mile Point 122.77 to Mile Point 125.31

This section was last overlaid in 1997 with hot mix asphalt. The pavement distress data collected during the annual statewide pavement rating data collection activities have revealed low ratings indices.

Fixed completion August 15, 2010

Locally Administered Projects

U000-131-165, M501

U000-131-166, M501

Hampton Roads District

The projects listed above are locally administered by the City of Chesapeake. The scope of work consists of the expansion of the existing traffic management center and system. This will include the installation of the following devices and upgrades to existing equipment.

Optimal locations of 19 CCTV devices

- Optimal location of 7 VMS devices
- Adaptive control of 33 signalized intersections
- Equipment upgrade and connection of 120 traffic signal intersections
- Permanent vehicle count stations (22)
- Upgrades of existing traffic management center
- Upgrade to the existing traffic management computer system
- Communications to and from field devices

The purpose of this project is to provide real time video surveillance for city roadways and the control of traffic signal intersections. This will allow the City to better use these devices to improve the transportation needs of the City of Chesapeake through signal timing adjustments and adaptive control.

The construction of the projects is anticipated to be completed by December 2010.

Design Build Projects

T-7440

Lynchburg and Salem Districts

This Regional Bridge Repair project includes the superstructure replacement of eleven bridges in the Lynchburg and Salem Districts. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient structures from VDOT's structure inventory.

Fixed completion September 25, 2011

T-7441

Culpeper, Northern Virginia, and Staunton Districts

This Regional Bridge Repair project includes the deck replacement of one bridge and superstructure replacement of twenty two bridges in the Culpeper, Northern Virginia, and Staunton Districts. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient structures from VDOT's structure inventory.

Fixed completion September 25, 2011

T-7442**Fredericksburg and Richmond Districts**

This Regional Bridge Repair project includes the deck replacement of one bridge and superstructure replacement of nine bridges in the Fredericksburg and Richmond Districts. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient structures from VDOT's structure inventory.

Fixed completion September 25, 2011

T-7443**Bristol District**

This Regional Bridge Repair project includes the rehabilitation and replacement of twenty two culverts in the Bristol District. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient or functionally obsolete structures from VDOT's structure inventory.

Fixed completion September 25, 2011

T-7447**Lynchburg District**

This Regional Bridge Repair project includes the rehabilitation and replacement of twenty eight culverts in the Lynchburg District. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient or functionally obsolete structures from VDOT's structure inventory.

Fixed completion September 25, 2011

T-7450**Salem and Staunton Districts**

This Regional Bridge Repair project includes the rehabilitation and replacement of six culverts in the Salem and Staunton Districts. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient or functionally obsolete structures from VDOT's structure inventory.

Fixed completion September 25, 2011

T-7435**Bristol District**

This Regional Bridge Repair project includes the superstructure replacement of nineteen bridges in the Bristol District. The work will include the installation of guardrail, guardrail terminals, pavement, and pavement markings. These projects will reduce the number of structurally deficient structures from VDOT's structure inventory.

Fixed completion September 25, 2011

0003-088-120, C501**Spotsylvania County**

This project includes widening approximately 1.2-mile of Plank Road from Route 707 (Chewning Lane) to Route 627 (Gordon Road) from the existing 4-lane divided facility to a 6-lane divided facility. The final project length may vary depending on the Design-Builder's final design. The Project includes the re-alignment of existing Cherry Road (Rte 706).

Fixed completion June 15, 2012
