

October 2019

The objective of STARS (Strategically Targeted Affordable Roadway Solutions) Program is to develop comprehensive, innovative transportation solutions to relieve congestion bottlenecks and solve critical traffic and safety challenges throughout the Commonwealth. The program, led by the VDOT Transportation and Mobility Planning Division, brings together planners, traffic engineers, safety engineers, roadway design engineers and maintenance specialists, along with local stakeholders, to jointly identify cost-effective measures aimed at improving safety and reducing congestion.

The Commonwealth's arterial network is the result of a major investment in public funds- to protect this investment VDOT works cooperatively with localities to develop plans and procedures dedicated to preserving the Commonwealth's existing transportation investments. Arterial Management Plans use a holistic approach that identifies ways to ensure safety and preserve the capacity of the Commonwealth's arterial highway network without wide-scale roadway widenings. Arterial Management Plans are a key component of the Arterial Preservation Program- providing localities and VDOT a guide to future development and supporting transportation network infrastructure.
